

**Complete the table in relation to Banks' observations of the native animals he observed during his eight days in Kamay (Botany Bay)**

| <i>Description by Banks</i>  | Name the Australian animal that Banks is describing in his journal | Draw the animal Banks is describing |
|--|--|-------------------------------------|
| <i>one quadruped about the size of a Rabbit</i>  |  |                                     |
| <i>the dung of a large animal that had fed on grass which much resembled that of a Stag;</i> |  |                                     |
| <i>the footsteps of an animal clawd like a dog or wolf</i>                                   |  |                                     |
| <i>Loryquets</i>   |  |                                     |
| Cocatoos   |  |                                     |
