

Activity 4: Representing geographical information – Where are animal habitats found?

Animal habitats are found in all vegetation types (ie. desert, grassland, forest and rainforest. Create a photo sketch of the eucalypt forest below. Label the habitat elements found in this environment).

Source 9: Eucalypt forest, Lane Cove National Park, NSW, photographed by C McGhee

Photo sketch:

What animals might use each of the habitat elements in this forest?

List the habitat elements you labelled and suggest animals that might use them.
